

Widen your lens with Research Commons

Explore more research connected to the world's most trusted citation database

Research more efficiently with Research Commons, a collection of journal output from open metadata sources that sits alongside the curated Web of Science Core Collection on the Web of Science platform.

Consult a more comprehensive set of research on a topic by querying a wider dataset with expanded coverage of research across disciplines and geographies. Then pinpoint research from vetted sources by filtering your results to the trusted Web of Science Core Collection.

Improve your analysis of the world's research with expansive publication data that is cleanly mapped to standardized organizations—enhanced data improves discoverability.

Prioritize quality or breadth based on your needs

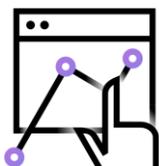

- Focus on trusted Core Collection content or zoom out for a broader view that includes additional sources

Explore a larger citation network

- Make connections between concepts faster with more citation links between research
- Locate active and emerging experts across geographies

Tell a broader story of your success

- Make decisions based on a more complete, detailed view of your organization's published research output
